

ABSTRACT

A minnow bucket that includes a bucket base and an automatic dispensing device positioned inside the bucket base that when raised on a vertical axis in relation to the bucket base dispenses at least one minnow. The minnow bucket may also include a lid that is
5 connected with the bucket base. The automatic dispensing device may comprise a minnow tray that is connected with a minnow tray handle. The handle is used by an angler to cause the automatic dispensing device to dispense minnows.
